Connecting Claude to your Umbraco website (Editor MCP)

This connection lets Claude find and edit content on your website using your own Umbraco account. You set it up in four steps.

This guide uses Claude as an example. If you use another AI tool that supports MCP, follow that tool's documentation. The MCP URL and your Umbraco login stay the same.

Before you start

WHAT YOU NEED	DETAILS
Claude Desktop	Installed and signed in.
Your website's MCP URL	Provided by Webwonders. See the example below.
Umbraco backoffice login	The same account you use to edit the website.

The MCP URL looks like this:

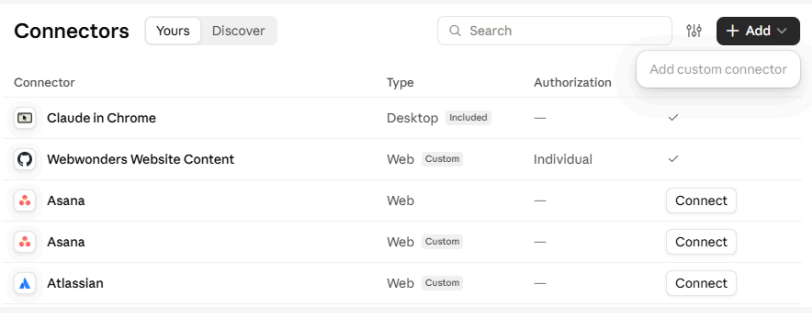
`https://cms.editor.17.mcp.umbraco.ai/at/<your-site-id>/mcp`

If you do not know your site ID or any of the other details above, you can request them from Webwonders.

1. Add the connector

1. Open Claude Desktop and go to **Settings → Connectors**.
2. Click **Add** (top right) and choose **Add custom connector**.
3. Enter a **Name** you will recognise, for example "[Website name] Umbraco".
4. Paste your website's MCP URL into the **URL** field.
5. Click **Add** to save.

The connector now appears in your list of connectors.

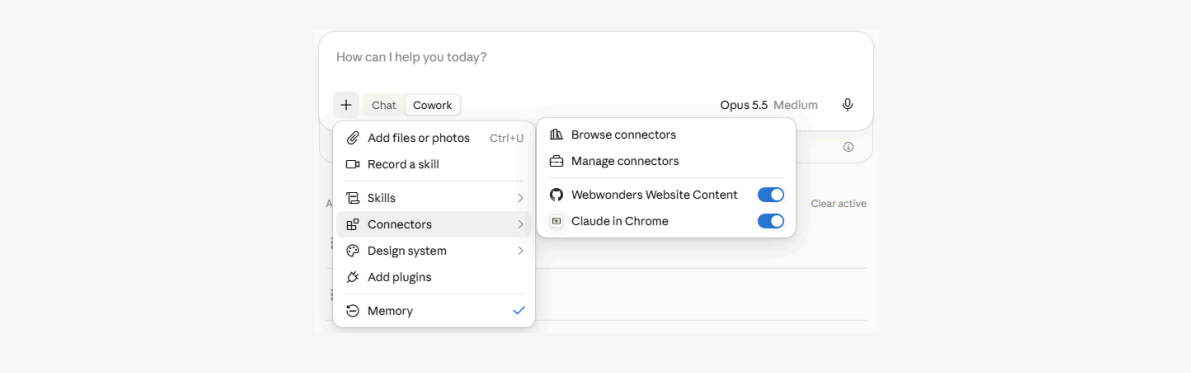


2. Log in the first time

The first time Claude uses the connector in a chat, you will be asked to log in to your website. Sign in with your Umbraco backoffice account. After that, you can use the connector in any chat.

3. Switch it on in a chat

When starting a new chat, click **+ → Connectors**. Your website connector is listed with a toggle. Make sure it is switched on.



Then ask Claude what you need. For example: "Find the page about our opening hours and update the Saturday times."

4. Control what Claude can do (optional)

Per tool, you decide whether Claude may use it freely, must ask you first, or is blocked entirely. For example, you can let Claude read content but have it ask before it publishes or deletes anything.

1. Go to **Settings → Connectors** again.
2. Click your website connector.
3. For each tool, choose one of the three settings in the table below.

SETTING	EFFECT
Allowed	Claude uses the tool without asking.
Needs approval	Claude asks for your approval first.
Blocked	Claude cannot use the tool.

Support

Get in touch with your contact at Webwonders. This also applies if you are missing any details, such as your site ID. If you would like to go through the steps together, we will set up a call.
